

**ASSOCIATED GENERAL CONTRACTORS OF ST. LOUIS**

July 1, 2002

Mr. George Emanoil, President  
 Questech  
 24630 Hathaway  
 Farmington Hills, MI 48335

Dear Mr. Emanoil,

The Construction Careers Center, a St. Louis, Missouri Charter High Sponsored by the Associated General Contractors of St. Louis have been very pleased with the Construction Zone Labs purchased by Questech this year. The labs are being used in our Construction Careers Class, a freshman class designed to create an awareness of the various opportunities available in the construction industry.

The Construction Careers Center Charter High School was developed by the Associated General Contractors of St. Louis to prepare students for the many opportunities available in the construction industry and to create a supply of entry-level high school graduates for the various apprenticeship programs or to continue with post-secondary instruction. The thirteen Questech Construction Zone Labs have provided an excellent opportunity for our freshmen students to gain hands-on experiences using the tools of the trade, connecting what they learn in the lab to the academic classes taught at the school. The individualized instruction that includes printed and audio materials provides the needed reinforcement students need to be successful.

The Construction Zone Labs have allowed the school to explore all aspects of the construction industry and apply many of the skills to their regular classroom instruction. This has allowed us to integrate our academic and vocational preparation. In addition to the excellent training materials, we have appreciated the support you and your staff have provided during our implementation process. The training materials have been excellent and the support service has been great.

Thanks for helping us have a successful first year at the Construction Careers Center.

Sincerely,

Terry Eivins  
 Director Apprenticeship and Training
